The composite

Tetric

The solution for all cavities

Efficient Esthetics

PowerCure

3s
The solution for all cavities

The Tetric line of products offers four carefully matched composite materials for direct restorative treatments.

Tetric EvoCeram® is a sculptable universal composite and Tetric EvoFlow® is a flowable universal composite for anterior and posterior restorations.

Tetric® PowerFill is a sculptable and Tetric® PowerFlow a flowable posterior 4-mm composite with light-curing times starting from 3 seconds.

- Chameleon effect ensures a natural shade blend
- True-to-nature esthetics for posterior restorations
- Time savings of up to 57%
- One kit for all cavities

More than 220 million restorations placed worldwide
95\% survival rate\(^3\)

1. Tetric PowerFill and Tetric PowerFlow compared to Tetric EvoCeram and Tetric EvoFlow, data available upon request.
2. Based on sales figures
3. A total of 890 fillings were monitored worldwide in seven clinical studies over observation periods ranging from 5 to 10 years.
If you want to replace lost tooth structure with a natural-looking esthetic restoration, you will require materials designed to mimic the light optical properties of the natural enamel and dentin as closely as possible.

One universal enamel shade for small defects
When working with the composites, one universal shade is sufficient to achieve a lifelike, esthetic result in most clinical scenarios.

Additional dentin shades for large defects
Both Tetric EvoCeram and Tetric EvoFlow offer various dentin shades with a low translucency to restore large defects or cavities with heavily stained dentin surfaces.

Translucency levels of the Tetric EvoCeram® shades

- **Dentin**: 7 – 10%*
- **Enamel**: 12 – 15%*

* Example values

**Anterior restorations** made of Tetric EvoFlow® A2 Dentin and A1

Source: Dr Ronny Watske, Ivoclar Vivadent, Liechtenstein

Starting situation: Diastema and defective fillings in teeth 12, 13, 22 and 23

Final situation
Exceptional chameleon effect
The special monomer and filler mixture is responsible for the exceptional chameleon effect. This effect ensures a natural shade blend with the surrounding dentition.

The refractive index of the monomer matrix matches that of the fillers - in this case, of the glass rod. It appears nearly invisible.

Posterior restoration made of Tetric EvoFlow® A2 Dentin and Tetric EvoCeram® A2

True-to-nature esthetics for posterior restorations

The 4-mm composites Tetric PowerFill and Tetric PowerFlow allow you to achieve the same esthetic results in the posterior region as with conventional composites.

The highly reactive, patented light initiator Ivocerin® has paved the way for the development of Tetric PowerFill and Tetric PowerFlow for esthetic posterior restorations.

Conventional composites designed for the placement of large increments are often very translucent. Ivocerin-containing composites offer enamel- and dentin-like translucency levels and up to 4-mm increment placements whilst achieving a reliable depth of cure.
The **Aessencio® technology** presents a milestone in the esthetic optimization of 4-mm composites. The material features a high initial translucency to be able to cure to the desired depth of cure. Whilst polymerizing, it gradually changes to a more opaque shade. In the case of Tetric PowerFlow, the final translucency is below 10% – a value that is very close to that of natural dentin. This allows stained tooth structure to be concealed effectively.

The in-vitro test demonstrates the effect of the Aessencio technology:
The black lines under the Tetric PowerFlow sample are clearly visible before light-curing. After curing, they are completely masked due to the change in translucency:

*Well-matched materials:*
The different consistencies and shades are uniquely formulated to be used in any combination. Very lifelike posterior restorations are possible, for example, when Tetric PowerFlow and Tetric EvoCeram are combined.
Higher process reliability due to fewer increments

As they enable a streamlined application protocol, Tetric PowerFill and Tetric PowerFlow are less technique sensitive than conventional composite resins.

The reason: Increased layer thicknesses of up to 4 mm are possible. This makes application of the composite less error prone and increases the ability to achieve successful long-term results.

- reduced risk for application errors
- reduced risk for process-related air entrapment
- reduced risk of insufficient curing

Fewer errors
thanks to short curing times

Light polymerization is seen as the most common source of error in direct restorative treatments. An efficient polymerization protocol that minimizes the curing time to the shortest possible length reduces the risks inherent in the light-curing step and increases the quality of the final restoration.

The light intensity produced by the curing device has a decisive effect on the length of time required to polymerize a composite. State-of-the-art curing lights can produce light intensities of up to 3,000 mW/cm². They allow exposure times to be reduced to be as short as 3 seconds in some cases. Should the curing light be accidentally moved during the curing procedure, the intelligent curing assistant of the Bluephase® PowerCure sends out an alert.

In addition, all shades of the Tetric family of products can be cured with the same exposure times.

Excellent handling properties
to suit every situation

Four different composite materials are all you need to meet the requirements of every direct restorative need. And they even offer you flexibility to exercise your personal preferences in your restorative treatments.

Sculptable handling
and reduced stickiness

The reduced stickiness of Tetric EvoCeram and Tetric PowerFill facilitates the creation of anatomical tooth structures. Modelling instruments such as OptraSculpt® are ideal for this purpose.

Flowable
when desired

While Tetric EvoFlow is flowable under pressure, it remains in place when no pressure is exerted. Due to its thixotropic properties, Tetric EvoFlow can be applied exactly where it is needed, making it suitable for use as a liner as well as a desired choice for small defects or anterior restorations.

Self-levelling
consistency

Tetric PowerFlow ensures excellent adaptation to cavity walls. It is ideally suited to fill large cavities in the posterior region.
“I have used Tetric EvoCeram ever since it was launched. It is very reassuring to see that the quality of the restorations continues to be outstanding, even after a number of years. Therefore, I expect similar performance of the further developed Tetric® PowerFill.”

Dr Eduardo Mahn
Director, Clinical Research and Esthetic Dentistry Program,
Universidad de los Andes, Santiago, Chile

Time-tested quality and durability

The Tetric range of products combines proven product features with state-of-the-art technology. The first protagonist of this range, Tetric EvoCeram®, has been successfully used in clinical applications for over ten years.

- **high radiopacity** of up to 400 % Al
- **low shrinkage stress** of e.g. 2.1 % in the case of Tetric PowerFill
- **long processing times** of more than 3 minutes
- **high flexural strength values** e.g. Tetric PowerFill: 119 MPa

* according to ISO 4049

One kit for all cavities

Ivoclar Vivadent has designed a kit that contains all the filling materials you need to restore all classes and sizes of cavities in the anterior and posterior region. The kit includes 4 types of composite resins in altogether 6 different shades that are intuitive to use.

**Tetric EvoCeram®**
shades A2, A2 Dentin and A3 are included in the kit

**Tetric EvoFlow®**
shade A3 is included in the kit

**Tetric® PowerFill**
shade “A” is included in the kit

**Tetric® PowerFlow**
shade “A” is included in the kit

The kits have been designed to fit the drawers of dental units.

Experience the difference with 3s PowerCure

When direct Class I and II restorations are placed in permanent posterior teeth, 3-second exposures from the occlusal aspect are sufficient for all curing steps with the Bluephase PowerCure in the 3sCure mode. Simply expose Adhese Universal, Tetric PowerFill and Tetric PowerFlow to the light-intensity of 3,000 mW/cm² produced by the curing light. You will notice right away that the curing time you require is considerably reduced. At the same time, you will continue to achieve the customary high-quality esthetic results.

"There is no way around the polymerization of composite materials. A 3-second cure comes in exceptionally handy here."

Dr Nathaniel Lawson
Assistant Professor and Division Director of Biomaterials
UAB School of Dentistry, Birmingham, USA
Save up to 57% on time in the posterior region\(^1\)

Maximize the efficiency of your workflow with Tetric PowerFill and Tetric PowerFlow. This means: You will need fewer increments, fewer changes of composite, modelling instrument and curing light to complete a restoration – whilst achieving the same or even better treatment results compared with conventional layering techniques.

The 3s PowerCure product system enables you to increase the efficiency of your workflow even further by offering 3-second exposure times compared with the placement of conventional 4-mm composites.

Time savings

4 mm
Efficient esthetics – even better together

The efficiency of the treatment procedure can be enhanced even further by combining the Tetric line with other state-of-the-art products from Ivoclar Vivadent.

While I had to schedule 45 minutes for an MOD filling in the past, I only need 30 minutes today for this type of restoration in the same high quality and esthetics – thanks to Tetric® PowerFill, Adhese® Universal and the short light-curing times of the Bluephase® PowerCure.

Dr Petr Hajný
Prague, Czech Republic

3 instead of 2 patients treated in the same amount of time without compromises in quality

Save valuable time during appointments.

Products that are optimally coordinated for direct restorative procedures enhance the efficiency with which high-quality esthetic restorations can be achieved.

1 **Isolate**
Effective isolation with **OptraGate®**, cotton rolls and saliva ejector

2 **Bond**
Direct intraoral application of **Adhese® Universal** with the efficient **VivaPen®**

3 **Restore**
**Tetric®** – The solution for all cavity classes

4 **Contour**
Time-saving contouring with **OptraSculpt®** due to its anti-stick effect

5 **Cure**
Reliable and fast curing with the **Bluephase®** curing units

6 **Polish**
High-gloss polishing in only one step **OptraPol®**
Tetric® CAD –
the esthetic composite block

Tetric CAD is an esthetic composite block for the efficient fabrication of indirect single-tooth restorations by means of the CAD/CAM technique. Due to the material’s excellent chameleon effect, Tetric CAD restorations blend seamlessly with the remaining natural tooth structure.

Tetric CAD ideally complements the Tetric line range of conventionally layered composite resins for inlays, onlays, veneers and crowns. Immediately after grinding, the restorations are polished and then seated using an adhesive cementation protocol. This processing technique is very efficient and allows esthetic results to be achieved quickly and easily.

The blocks are available in two translucency levels: MT (Medium Translucency, recommended for laminate veneers and crowns), which is available in fives shades, and HT (High Translucency, recommended for inlays and onlays), which is available in 4 shades. While the small size I12 block is suitable for inlays, the large block C14 provides sufficient material for a crown.

“Tetric CAD is fast and easy to process. After the restoration has been ground, it can be polished to a high gloss in no time.”

Dr Lukas Enggist
Ivoclar Vivadent, Schaan, Liechtenstein

## Delivery forms

### Tetric composites

#### Tetric EvoCeram® – The universal composite

**Refills**
- Available as 1 x 3-g syringes, 3 x 3-g syringes and 20 x 0.2-g Cavifils in the following shades:
  - Enamel shades (12%):
    - A1, A2, A3, A3.5, A4, A1, B1, B3, C1, C2, C3, D2, D3
  - Dentin shades (7%):
    - A2 Dentin, A3.5 Dentin, A4 Dentin, B2 Dentin
  - Highly translucent enamel shade (15%):
    - Bleach shades: Bleach XI, Bleach L, Bleach I, Bleach M

**Shade guide**
- Tetric EvoCeram shade guide

#### Tetric EvoFlow® – The universal flowable composite

**Refills**
- Available as 1 x 2-g syringe and 20 x 0.2-g Cavifils in the following shades:
  - Enamel shades (12%):
    - A1, A2, A3, A3.5, A4, B1, B3
  - Dentin shades (7%):
    - A2 Dentin, A3.5 Dentin, B2 Dentin
  - Highly translucent enamel shade (23%):
    - Bleach shades: Bleach XI, Bleach L, Bleach M

**Shade guide**
- Tetric EvoFlow shade guide

#### Tetric® PowerFill – The sculptable 4-mm composite

**Bluephase PowerCure & System Kit Syringe**
- 1 x Bluephase PowerCure 100–240V with system kit:
  - 1 x 3-g syringe Tetric PowerFill IVA, 1 x 2-g syringe Tetric PowerFlow IVA, 1 x 2 ml Adhese Universal VivaPen

**Bluephase PowerCure & System Kit mixed**
- 1 x Bluephase PowerCure 100–240V with system kit:
  - 1 x 3-g syringe Tetric PowerFill IVA, 1 x 2-g syringe Tetric PowerFlow IVA, 1 x 2 ml Adhese Universal VivaPen

**Tetric PowerFill System Kit Syringe**
- 1 x 2-g syringe Tetric PowerFill IVA, 1 x 2-g syringe Tetric PowerFlow IVA, 1 x 2 ml Adhese Universal VivaPen

**Tetric PowerFill System Kit mixed**
- 20 x 0.2 g Tetric PowerFill IVA, 1 x 2-g syringe Tetric PowerFlow IVA, 1 x 2 ml Adhese Universal VivaPen

**Refills**
- Available as 1 x 3-g syringes, 3 x 3-g syringes and 20 x 0.2-g Cavifils in the following shades:
  - Universal shades (15%):
    - IVA, IVB
  - Bleach shades: IVW

**Shade guide**
- Tetric PowerFill & Tetric PowerFlow shade guide

#### Tetric® PowerFlow – The flowable 4-mm composite

**Refills**
- Available as 1 x 2-g syringes and 20 x 0.2-g Cavifils in the following shades:
  - Dentin shades (≤ 10%):
    - IVA, IVB
  - Bleach shades:
    - IVW

**Shade guide**
- Tetric PowerFill & Tetric PowerFlow shade guide

#### Tetric-Line – The solution for all cavities

**Tetric-Line System Kit Syringe**
- 1 x Tetric PowerFill IVA, 1 x Tetric PowerFlow IVA, 1 x Tetric EvoCeram A2, 1 x Tetric EvoCeram A3, 1 x Tetric EvoCeram A2 Dentin, 1 x Tetric EvoFlow A3, 1 x Adhese Universal VivaPen

**Tetric-Line System Kit mixed**
- 10 x Tetric PowerFill IVA, 1 x 2-g syringe Tetric PowerFlow IVA, 10 x Tetric EvoCeram A2, 10 x Tetric EvoCeram A3, 5 x Tetric EvoCeram A2 Dentin, 1 x Tetric EvoFlow A3, 1 x Adhese Universal VivaPen

#### Accessories

- **20 x 1.2-mm tips black**
  - Tetric PowerFlow
- **20 x 0.9-mm tips black**
  - Tetric EvoFlow and IPS Empress Direct Opaque
